DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 15,18,21 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Ala-Laurila, U.S. Patent No. 6,246,871, newly discovered.

Regarding claim 15, Ala-Laurila discloses a method of providing access to a specific message stored on a message server, said method comprising:

generating a unique message pointer (i.e., server telephone number and temporary access code) associated with said specific message (i.e., temporary message associated with temporary access code) stored on said message server and sending said message pointer to a subscriber (i.e., designated recipient), wherein said message pointer enables direct access to said stored message through a network (col. 3, line 61 to col. 4, line 3 and lines 33-36).

Art Unit: 2681

Regarding claim 18, Ala-Laurila discloses a method of retrieving a specific stored message comprising:

receiving a pointer (i.e., server telephone number and temporary access code) to said specific stored message (i.e., temporary message) and using said pointer to gain direct access to said stored message server through a network (col. 3, line 61 to col. 4, line 3 and lines 33-36).

Regarding claim 21, Ala-Laurila discloses a message notification system comprising:

a pointer (i.e., server telephone and access code) generating unit for generating a pointer to one or more messages stored on a message storage device, wherein the message pointer includes direct access parameters to said stored message (col. 3, line 61 to col. 4, line 3 and lines 33-36); and

a transmitting unit to transmit the pointer to a subscriber (col. 4, lines 61-64).

Regarding claim 22, Ala-Laurila discloses the system according to claim 21, wherein the pointer generating unit generates a telephone number through which a subscriber may gain direct access to the store message (col. 4, lines 61-64).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made

Art Unit: 2681

to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 16,17,19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ala-Laurila in view of Yablon, U.S. Patent No. 5,764,731, previously used.

Regarding claim 16, Ala-Laurila discloses the method according to claim 15. Ala-Laurila fails to explicitly disclose sending a message identifier to the subscriber.

In a similar field of endeavor, Yablon discloses sending a message identifier to the subscriber (col. 4, lines 53-58).

At the time of the invention it would have been obvious to one of ordinary skill in the art to have modified Ala-Laurila to include a message identifier for the purpose of providing enhanced user information to identify the caller as suggested in Yablon (col. 4, lines 53-58).

Regarding claims 17 and 20, Ala-Laurila discloses the method according to claims 16 and 18, respectively, wherein said message pointer is a telephone number (i.e., server telephone number) associated with said specific message on said message server (col. 4, lines 61-64). Ala-Laurila fails to disclose wherein said message identifier is information relating to a source of said stored message.

In a similar field of endeavor, Yablon discloses sending a message identifier to the subscriber (col. 4, lines 53-58).

At the time of the invention it would have been obvious to one of ordinary skill in the art to have modified Ala-Laurila to include a message identifier for the purpose of providing enhanced user information to identify the caller as suggested in Yablon (col. 4, lines 53-58).

Art Unit: 2681

Regarding claim 19, Ala-Laurila discloses the method according to claim 18. Ala-Laurila fails to disclose receiving a message identifier.

In a similar field of endeavor, Yablon discloses sending a message identifier to the subscriber (col. 4, lines 53-58).

At the time of the invention it would have been obvious to one of ordinary skill in the art to have modified Ala-Laurila to include a message identifier for the purpose of providing enhanced user information to identify the caller as suggested in Yablon (col. 4, lines 53-58).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. .

Moon, U.S. Patent No. 6,1818,923, discloses a method and apparatus for event notification for wireless devices.

Ozaki et al.,U.S. Patent No. 5,933,478, discloses a data transfer system and handheld terminal device used therefore.

Ball et al, U.S. Patent No. 6,240,391, discloses a method and apparatus for assembling and presenting structured voicemail messages.
